

**PRODUCT: GRAPHITE GREY GROOVED DECKING**

**SIZE: 125M2**

**INSTALLED: JANUARY 2018**

**PROJECT MANAGER: MEDIA CITY**

**MAIN CONTRACTOR: PREFERRED SPACES LIMITED**

**INSTALLER: TRU-DECK SOLUTIONS**

**The Client:** Media City – Developing suitable and relaxed work space areas at Media City.

Preferred Spaces Limited – A team of creative and resourceful designers produced a scheme which reflects your brand and identity, to create an inspiring and practical workspace solution.

Tru-Deck Solutions were awarded the contract at Media City to install an external raised decked area with safety balustrade, timber screening, pergolas, storage building and outdoor cedar clad huts.

The huts were designed by the client, the panels were built in our warehouse in sections and fitted in situ on site, they were then clad in Cedar Shingles.

The project had a number of different challenges, namely getting the material lifted onto the fourth floor. This was expertly carried out by Ainscough.

The main challenge was to weigh down the decking system due to the extreme wind tunnel conditions that flowed through the avenue. The weighting system was designed by the Architect.

The deck levels needed to be approximately 700mm high. For this we used our raised pedestal systems with 47 x 225mm C24 Treated Timber Joists. The design also incorporated a weighted pallet system with stainless steel straps.

We laid 24 x 150 mm Composite Graphite decking in 4.8m lengths using hidden fixing clips, narrow groove side up. The area was designed to use as a relaxing chillout space and for office workers to get some fresh air.

We worked closely with the main contractor to deliver the project on time and on budget.
